

AMENDMENTS TO THE SPECIFICATION:

Applicant submits herewith a substitute specification to incorporate the Examiner's requests as follows:

- 1) place and re-number Appendix I between the specification (ending at page 45) and the claims (at page 46);
- 2) placing all footnotes into the body of the specification; and
- 3) making any embedded hyperlinks and/or other form of browser-executable code inoperative.

Applicant believes that this places the specification into correct form and requests that the objection is thereby withdrawn.

Applicant has noticed that the title of the invention has been changed. Please correct the title to the original title as follows:

"Remote Control of Wireless Electromechanical Device Using a Web Browser"
